

HW1:

請描述以下程式碼在C++與JAVA中執行的結果(無視語法錯誤)

```
class Dog{  
  
    bark(){  
        print("bark!!")  
    }  
}  
  
main(){  
  
    Dog dogs[3];  
  
    for(int i=0; i<3; i++){  
        dogs[i].bark();  
    }  
}
```

C++:

bark!!

bark!!

bark!!

Java:

NullPointerException

Java 創建的時候是reference預設只會是null

HW2:

If I want to swap two variables in Java, how should I do it?

Please write some Java code to show your answer.

Normal variable:

```
int x = 10;
```

```
int y = 20;
```

```
int temp;
```

```
temp=y;
```

```
y=x;
```

```
x=temp;
```

Object:

```
class Box {
```

```
    int value;
```

```
}
```

```
public class Main {
```

```
    static void change(Box b) {
```

```
        b.value = 100;
```

```
    }
```

```
    public static void main(String[] args) {
```

```
        Box box = new Box();
```

```
        box.value = 10;
```

```
        change(box);
```

```
        System.out.println(box.value); // 100
```

```
    }
```

```
}
```
